CONSIDER THE BENEFITS OF THE CLEARFLOW WASTE WATER TREATMENT SYSTEMS

- ✓ ClearFlow Systems provide consistent treatment in a fully automated and completely adaptable format. All controls and motor functions have variability to the infinite level to allow the process to be “tuned” to your specific needs. The systems include Ethernet capability to allow access to critical information and to provide email notification of operational status.
- ✓ ClearFlow Systems are constructed of 304 Stainless Steel and designed to be rugged and long lasting. The system is also powder coated and then a ceramic clear coat is applied in entirety. All components have a high level of compatibility with the potential variety of waste streams it may encounter. Components selected are well known for quality and long lasting service.
- ✓ ClearFlow Systems can be warranted for Five Years on replacement parts. Every component for 1,825 days.
- ✓ ECE’s blend’s of ClearFloc Encapsulate provides assurance in the proper treatment of the waste stream generating a high quality effluent while ensuring the resulting spent ClearFloc will pass TCLP and be able to be discharged as a non hazardous waste. ECE will provide assurance in the form of a warranty that a TCLP will be passed.
- ✓ ClearFlow Systems not only provide a quality effluent but also reduced cost of operation compared to similar operations. ECE can provide a cost of operation warranty that assures the client the

Environmental Compliance Equipment

cost to operate will not exceed a preset cost. Now our clients can write a number on the P&L for waste treatment cost and know it will not exceed that line item.

- ✓ ClearFlow Systems can be applied to a variety of waste streams and can be programmed to process multiple waste streams using a single system. Multiple waste streams that cannot be comingled can be treated using one ClearFlow system. Adaptability of the programming allows one system to treat multiple wastes.
- ✓ ClearFlow Systems can provide water for reuse in all applications using post treatment technologies to provide high quality recycled water. We use corona discharge ozone, UV ozone and UV sterilization. Various media's form carbon, multi-media, ion exchange and filtration. Membranes and Evaporation with condensers.
- ✓ ECE's "Family of Technologies" provides pre and post filtration to ensure proper treatment of a waste stream. Oil Water Separators, Settling Systems, Oil Adsorption Technology. We also provide PH adjustment, chemical precipitation and advanced oxidation. As well as the post filtration listed above. We have a vast network of companies that manufacture waste treatment technologies ECE does not, that may need to be incorporated into a client's process.
- ✓ ECE's principals have nearly 20 years of experience in industrial waste water treatment and customer service. Our first responsibility is our client and we can prove our commitment to them and you, if you decide to be one of our clients.

ECE's team looks forward to working with your team!
